IBC FLEXY-Runner Curved Guide

IBC Wälzlager GmbH has adapted and extensively expanded its comprehensive wide range program of linear motion bearings and telescopic guides to the requirements of their customers for applications in the area of railway technology. The IBC product range has new systems for door openings, steps, battery extraction, electronic-cabinets and interior parts now available. For example carriages in user-specific designs that are used in door opening systems with several locking positions of telescopic pull-outs for electronic-units, that for service purposes, have to be extendable in various positions. IBC additionally offers separable telescopic pull-outs for applications with difficult to access housings, that fulfil all safety requirements. The outstanding features of the linear motion bearings and telescopic guides of IBC include their long service life, their user friendly-handling as well as their economic-efficiency.
