AND TRENDS**

For a long time M-PT has been addressing the bolt maintenance. As world premiere M-PT introduces its electric torque wrench series MED. With the development of a highly sensitive Bolt Check Function, this tool is suitable for bolt maintenance. Bolted connections can be tested without turning the bolt further. In addition the MED can be equipped with a data logging software, which collects all bolting data to be read out on the PC. As authorized distributor of the Canadian manufacturer RAD Torque Systems, M-PT supplies the whole of Germany with bolting systems of high quality. The probably best known torque wrench is the E-RAD BLU. Repair, maintenance and calibration are naturally included in the service and are supplemented by the rental service.
