

Front working platform with 3-in-1 chassis

Innovative front working platform with 3-in-1 chassis

A multi-purpose front working platform with innovative chassis for multifunctional use from GÜNZBURGER STEIGTECHNIK increases safety and efficiency at work, while replacing wind screens, repairing screen wipers and servicing the headlight. The front working platform is built on a stable chassis with polyamide swivel castors (Ø 200x80) and can be used and moved anywhere on all flat surfaces. It can also operate on tracks and elevated tracks. The heart of the system is the ingenious 3-in-1 chassis solution with a telescopic tube system and outriggers that are lowered by spindle jacks. The platform is 3,260 mm wide with a work surface of about 4 m² it can be raised, lowered and adjusted with a cable winch. Access is via a vertical ladder.
