New railway workman basket

Workman basket BB049

The new PALFINGER railway workman basket BB 049 requires little space, is stowed away quickly but provides outstanding performance, stability and safety. The BB 049 can be placed directly on the roof of the carrier vehicle and is therefore ideal for use in confined spaces. The newly developed rotary drive for the levelling system and the telescopic railing enable a low transport and storage position with a total height of only 800 mm in transport position. The user-friendly levelling mechanism ensures smooth, steady movement. The very lightweight basket, made of aluminium but extremely robust due to the square aluminium tubes (max. load 600 kg), is straightforward and simple to hook up and detach. Moreover, thanks to its conformance to EN280, it guarantees maximum safety. Workman basket BB049
