

ecoMOTO EV charging stations

ecoMOTO - EV charging stations

ecoMOTOhome – wall-mounted EV charging station

The ecoMOTO is a device for charging electric cars and e-bikes. The device is ergonomically designed with high resistance to bad weather and vandalism. This device is simple and intuitive to use, equipped with a 7" touchscreen, by which the owner of the electric vehicle chooses the charging position and the amount of electricity. Payment for electricity is made using a contactless bank card or MiFare reader. The charging session and the printout of the payment confirmation are made after the charge has been accepted and credited to the account of the energy provider. Unused payment for energy from a particular charging session may be used for charging at a later date. The ecoMOTO charging station is equipped with standard type 2 three-phase jacks (2 x 22 kW AC). Wall mounting is also available.
