Technology for Smart Wheel Reprofilng

DANOBAT Underfloor lathe

DANOBAT Underfloor Integrated measuring system

The company will present its technological development for intelligent wheel machining at the upcoming InnoTrans fair. The technology developed by DANOBAT reduces cycle time, increases the process reliability and safety and extends the life of the wheels within railway fleets. The stand will also be dedicated to explain DANOBAT's comprehensive solutions to all manufacturing processes of rolling stock parts. In addition, the company will avail of this opportunity to share its digital value proposition composed of in-house, technological developments based on industry 4.0. The aim is to advance in the creation of intelligent manufacturing spaces, fitted with interconnected equipment and capable of autonomous operations.
