Tunnel cleaning machines with high efficiency

Cleaning the Gotthard Base Tunnel

Cleaning train with various components

The family business Brügger HTB is specialized in the efficient cleaning of the railway infrastructure and is managed by three brothers. In the area of tunnel cleaning (dry cleaning), extraction systems for banquetts, rail beds and vaults were developed for the 34.6 km long Lötschberg base tunnel (Frutigen - Raron, 1 tube). In the meantime, regular cleaning work in the Lötschberg as well as in the 57 km long Gotthard Base Tunnel (Erstfeld - Bodio, 2 tubes) has become one of the company's tasks. Brügger is the market leader in dry cleaning of railway tunnels. This is why special cleaning in railway tunnels and open railway lines for the Swiss Federal Railways (SBB) and the Bern-Lötschberg-Simplon railway (BLS) are regular tasks. Brügger HTB is one of the pioneers in the customer-specific development of tunnel cleaning machines.
