Flexible cable protection for rail

Flexicon ULTRA™: World's best conduit fitting

System integrity is essential for the safe functionality and continuous operation of rail and transport systems. Ingress protection and dynamic performance as well as vibration, constant movement & sudden inertia can compromise system performance. Flexicon Ultra™, the latest product innovation is a one-piece non-metallic fitting solution which offers fit and forget assurance when it comes to performance and integrity. With integrated sealing technology, providing superior IP levels of IP68 (2Bar) & IP69, these fittings offer up to 70 kg tensile strength and provide anti vibration and shock protection. Simplicity & reliability is achieved with a push fit connection and the unique design offers a removal facility using a screwdriver. Flexicon Ultra™ will be put to the test at InnoTrans 2018 on three live demo rigs to illustrate its strength, integrity & assurance.
