## AI based machine translation for perfect passenger information

Aristech's multilingual announcement generator

Not only international passengers will be thrilled about this innovation: By a few clicks, Aristech's multilingual announcement generator (MAG) will produce and translate perfect announcement output by text-to-speech voices. Several module phrases are already there to choose from; an individual vocabulary can be added, both for repeating standard information, or up-to-date announcements. AI based machine translation provides extra safety: within seconds, correct multilingual information will be produced by sophisticated linguistic algorithms, in any language desired. Once generated, they stay available in the same quality with Aristech's special human sound.
