Clean without any residue

Cleaning with dry ice minimizes downtimes

Trains and buses being out of service cost money. The dry ice mobile cleaning for electric control boxes from Benway Industrial Services reduces outage durations thus saving time and money because the electric boxes do not have to be dismantled. The dry ice pellets (CO₂) are blasted onto the surface as solid material becoming gaseous then. The advantage of dry ice cleaning is that it is electrically non-conducting. Therefore, the electric control boxes can be cleaned safely and quickly. Dry ice cleaning is thorough, safe for surfaces and environmental-friendly since no aggressive detergents are needed. After the cleaning process, the dry ice evaporates completely. The mobile service teams are available at the bus and train depots within Germany in a minimum of time.
