Photoluminescent safety signs & systems for public transportation

Photoluminescent safety signs and systems

During an emergency, clear recognition of the location of emergency and fire-fighting equipment, along with clear and unambiguous identification of the escape routes, can make all the difference when safeguarding human-lives. This clear recognition of such safety systems can be secured with the installation of Everlux photoluminescent safety signs and systems. Everlux has been developing and manufacturing photoluminescent safety signage solutions suitable for installation in industrial, commercial and residential buildings since 1989. This wealth of knowledge and experience has been brought to bear in the development of a specific range of products suitable to meet the requirements of the public transportation sector including trains, trams, buses and coaches. At InnoTrans, Everlux will present for the first time its new range of photoluminescent safety signs and systems for the public transportation sector.
