## FALCON - Kanban redefined

FALCON, the revolutionary kanban solution by Ferdinand Gross

FALCON, the revolutionary kanban solution from Ferdinand Gross, visualizes all kanban storage locations, so that no more articles have to be searched for. An Excel export function implemented in the software cockpit for individually created filters allows the buyer to control the use of their C-parts even more specifically. Statistics, reports, and fast response to demand peaks are no longer problems thanks to the reporting tool – and that means all the data, from consumption to capacity to price, is all completely transparent. FALCON is also available as an app. Whether in the office or on the road – with FALCON C-parts management just got a little bit more transparent and more convenient.
