All-in-one threshold switch for rail applications

The LCON Rail Infinity threshold switches with a larger range of functions

Lütze Transportation presents LCON Rail Infinity which has two programmed threshold switches including converters for highly precise analogue and temperature signals. The new switches follow the "all-in-one" principle of state-of-the-art equipment in the rail sector: Lütze is the first company ever to supply combination units that integrate two potential-free threshold switches DC 110 V/1.5 A as well as a very precise analogue output in one casing. LCON offers important benefits: in addition to space savings in the control cabinet and the fact that much less wiring work is required, only one product type needs to be kept on stock in production. Lütze threshold switches each have a wide range power supply of DC 24 V to 110 V for worldwide use.
