## Ultralight hose for ventilation systems

The HPL2P-SK from Matzen & Timm belongs to the so-called "Ultra-Lightweight-Hoses"

Matzen & Timm, a brand of the Masterflex Group, presents new and proven components and systems for rail vehicles. The highlight of the fair is the lightweight hose HPL2P-SK. Originally developed for aviation, it is also used in ventilation systems for rail vehicles. The HPL2P-SK belongs to the so called "Ultra-Lightweight-Hoses", so it is an ultra-light tube. With two Hypalon layers and a non-metallic spiral, it is relatively simple in construction, but extremely powerful due to its strong material and high-quality workmanship. Like most of Matzen & Timm products, the HPL2P-SK is approved in accordance with the requirements of the current fire protection standards for the aviation and railway industries (e.g. EN 45545, JAR/FAR 25.853 (a), ABD 0031).
