## Pin Fin and Alu Fin providing the new cooling standard

In-house fabrication

Radiator unit in VLocity DMU

Air Radiators have a proven track record when it comes to delivering customised cooling solutions to keep rail equipment on the move. Exhibiting at InnoTrans will showcase the innovation and experience of Air Radiators to produce unique cooling packages which deliver reliability, durability and high performance in applications including locomotive, Diesel Multiple Unit (DMU) and track maintenance equipment. Air Radiators will showcase the innovative new standard in cooling products - Pin Fin and Alu Fin - designed to maximise machine uptime, maintain thermal performance, guaranteed to last and allow easy cleaning and servicing. This new technology coupled with diverse other Air Radiators capabilities and products allow to design and validate tailor-made packages which deliver world-class performance results.
