Innovative solutions for tramway overhead lines

The new contact wire crossing (design modifications are reserved)

Section insulator Save-T (design modifications are reserved)

The globally operating company Arthur Flury AG manufactures high-quality electromechanical components and systems. At InnoTrans two new products for the tramway overhead contact line will be presented: The new Save-T section insulator is an innovative solution for 1 kV DC systems. It can be used at relatively high speeds in both directions, convinces by its low weight as well as the proven Arthur Flury quality and is quickly installed. Another new product innovation is based on a further development of the proven FDX tram crossing and is system-specifically adjustable between 50 ° - 90 ° for flexible use.
