

Pioneering real-time fare evasion control system

Real time fraud detection system DETECTOR for public transport systems

Note: This scene is a simulation played by actors

Tailgating scene simulated by actors

Software company Awaait will showcase its pioneering automatic real-time video analytics system DETECTOR that tackles fare evasion in public transport in real-time. Using Artificial Intelligence-Machine Learning algorithms, a camera above ticket barriers observes the ticket validation process and sends an alert to inspectors' smartphones when it detects fare-dodging. This allows very selective controls to intercept offenders before they reach the platform, effectively helping to reduce fare evasion without bothering paying passengers and, therefore, not disrupting overall mobility.
