The punctual passenger counting software SIGMA

Occupancy level and passengers boarding/disembarking over the journey. Top: Punctuality curve

This heat map shows vehicle occupancy per month. The darker the colours, the higher the occupancy

This year, Connective GmbH presents SIGMA - the new background ridership processing system. Unique thereby is the combination of the SIGMA passenger counting solution with the OPAL punctuality suite – enabling statistical analyses and evaluations from various operational perspectives. SIGMA is a highly stable system based on the latest DP technology and can process all standard data input formats. It was developed over the last two years in close cooperation with transport operators as a solution reflecting practical conditions for operators and networks of all sizes.
