

EBG universal enclosure

Meter exchange cabinet with three metering units

Transducer metering

EBG electro's universal enclosure offers flexibility in every respect. It is available in nearly all conceivable dimensions and with a large number of individual configuration choices, e.g. as meter exchange cabinet or for the use of control units. The recyclable plastic material is shock-proof and flame-resistant and allows a fully insulating design of the enclosures. Front doors are sealed against ingress of moisture or dust. Inside hinges allow flush placement of several enclosures next to each other; wall-mounting is possible from inside or outside.
