## **INFRALIFE®: New software solution for asset management of railway infrastructure**

Linear Route Map, GIS Map, Switch Inspection Sheet

The software solution INFRALIFE® of the Austrian provider answers all essential questions regarding railway network, assets and conditions. It addresses infrastructure managers, engineers and those who need reliable asset information. Applications and functions include infrastructure master data, management, condition monitoring, periodic maintenance, defect, fault and life cycle management. The product is preconfigured with best practice asset registers and ready to use. The platform is based on the latest technology, highly configurable and contains a mobile application for field workers. A unique selling proposition of the software is the visualization of infrastructure data in maps and management dashboards.
