

Railway lifting systems

Wheelbase adjustable stacking racks as ideal solution for space-saving bogie storage

With hundreds of installed systems globally, Autolift is one of the leading manufacturers of railway lifting systems. The portfolio goes from mobile lifting jacks, turn and drop tables and rotators to underfloor installations positioning Autolift as a complete provider in the field of railway lifting. Autolift offers customized systems ranging from light rail vehicles over heavy trainsets and locomotives to underfloor solutions. The company offers wireless and battery powered options along with special designs on customer request. On this year's InnoTrans Autolift will introduce wheelbase adjustable stacking racks as ideal solution for space-saving bogie storage as a new product.
