## Cab Radio communication platform (FRMCS-Ready)

Cab Radio HMI with unified user interface

ErvoCom presents at InnoTrans 2018 the new FRMCS-Ready Cab Radio TCH2170 for Rolling Stock. This modular system allows for seamless integration of Cab Radio voice and data functionalities based on the most recent Mission Critical Push to Talk (MCPTT Rel. 13) standardization of ETSI alongside with existing Dual-Mode solutions to allow a smooth system technology migration. The TCH2170 system comes with a wide set of extensions such as PAS- and PIS-modules for the entire on-board train communication aspects. The voice solutions for PA, INTERCOM, etc. are available either in modern IP technology (VOIP SIP) or according UIC558 & UIC568 standards.
