Reliable cable protection solutions with the highest degree of protection

FIP presents first T- and Y-distributors bearing the IP69 rating

The ATPA T-distributor and the AYPY Y-distributor of the FIPLOCK® ONE program are the first on the market bearing the IP69 rating. Both distributors of Fränkische Industrial Pipes GmbH & Co. KG feature the newly developed 360 ° interlocking system as well as an inside conduit seal and are dustproof and waterproof. The ATPA-CA push-fit T-adapter can be mounted individually and in a space-saving manner next to each other – this allows many combinations with the highest IP protection class. In addition, the T-adapter saves time during installation and removal: FIP provides the stable adapter preassembled, and the installed component can be re-opened at any time using a slotted screwdriver. Special FIP solutions for railroad technology ensure fire protection and highest mechanical and dynamic load capacity. This protects cables and wires inside and outside the train.
