New compact brake testing unit BPG Gz 3 „Compact“

Brake testing unit Gz 3 „Compact“

To meet the requirements of a lite and more cost-effective brake testing unit IP RailEquipment debut the new brake testing unit BPG Gz 3 „Compact“. It is based on the approved brake testing technology and is featured by a new compact housing with a depth of 100 mm and minor requirements for the fundament. New requirements from DB Systemtechnik and DB Netz result in an optimized brake testing. The unit will be installed stationary between the tracks on a foundation and can perform the brake testing or pressure maintenance at cargo trains. The targeted adaptation at the new requirements and application fields results in a significant reduction of investment costs.
