Digital switch measuring technology: Installation service without any disruption

LAT technicians install sensor technology in track bed

With a new innovation service, LAT Fernmelde-Montagen und Tiefbau GmbH is supporting tech start-ups with test installations, both in the roll-out phase and with subsequent maintenance. The Berlin-based, family-owned company with 50 years of experience in the transport business bridges the gap between a love of tradition and euphoria about progress. Its technicians are specialized in installing industrial IoT solutions, digital measuring technology and intelligent sensors in the track bed. This work is performed without any disruption to service. Currently, sensor technology is being installed for KONUX. Foremen use digital clipboards, while site managers document the installation work in real time.
