ARCOSystem – Elevated GRP cable duct

ARCOSystem installations incl. mounting parts

Liverpool Lime Street – wall mounted cable duct system installation

In recent years, the ARCOSystem elevated GRP cable duct has been installed not only along tracks on sigma posts, but also on walls, bridges or on the ground. Installations have been erected in urban areas with dense traffic in which a classical elevation with an attachment to the post is no longer possible. The mounting parts have been continuously expanded and adapted for these installations. Installations have been successfully implemented at the new Liverpool Lime Street train station (wall mounted), Crossrail Anglia from Stratford to Liverpool Street (wall mounted), London Bridge (wall mounted), St. Goarshausen - Boppard (wall mounted on the Rhine route), Erasmus Bridge The Hague (floor mounted), Husum and Lübeck (wall mounted EINLWL size 0).
