Digitalization of railroad bearings and advantages of the Data Matrix code

Data Matrix marking of railroad axle box bearings

Data Matrix marking of railroad axle box bearings

Following the demand of current and potential clients, EPK has introduced Data Matrix marking of railroad axle box bearings. Data Matrix allows quick access to key information about each individual bearing. Data from Matrix code is easily transferred into the client's internal tracking system and each bearing can be traced back. It also serves as an extra counterfeit protection. Data matrix is easy to use and can be applied to any bearing upon request. EPK is always open to innovations and development opportunities and welcomes customers to work together on new projects.
