

## Simulation trainer with enhanced functionality

Simulation trainer with external monitor and trainer unit Simulation trainer with enhanced functional

Müller Systemtechnik GmbH presents the next generation of its Simulation trainer for the training of train drivers. The separate trainer unit is new and enables instructors to influence an exercise interactively. Like the driver's cab display, it uses a tablet PC. This means this version of the Simulation trainer, like the one before it, is suitable for use in both stationary and mobile contexts. For trainees, there is a range of scenarios to help them learn how to drive safely. During the entire exercise, instructors can concentrate on the learner and his or her actions. Furthermore, they now have the option of adjusting the level of difficulty by changing the environmental conditions or adding disruptions on the line or engine failures.
