All-round advanced recording system

MidaRec: All-In-One Recording System

All-in-one recording platform MidaRec

Mida Solutions develops software products and other equipment for professional recording of communication in rail and public transport systems. The MidaRec recorder is an all-in-one recording platform which serves as an inexpensive total solution for all railway communication. The "all-round" approach supports all relevant communication technologies involved in the transportation and technical environments. This enables the system to easily handle the requirements of Public Announcements, Dispatchers, TETRA/DMR, and GSM-R and LTE devices. Using full virtualization, it ensures scalability, reliability and modularity. The application software is completely independent of the underlying hardware. The system provides a unified view of all communications, a search and play console accessible from any device, and advanced call scenario reconstruction tools.
