

Extremely light, battery operated hand-held marking unit FlyMarker® mini

Hand-held marking system FlyMarker® mini

FlyMarker® mini in action and marking examples

For durable and forgery-proof marking of industrial parts, MARKATOR® presents the newest model of the battery operated hand-held marking device – the FlyMarker® mini. It convinces with its light weight of 2,4 kg (incl. battery) and its compact design as well as its attractive price-performance ratio. The long battery life, a big marking area of 65 x 30 mm and an integrated keyboard are other important features. It is possible to mark characters, numbers and individual company logos, test symbols or Data Matrix Codes on nearly all materials – from plastics up to hardened steel. Even after subsequent processing such as coating, the marking remains visible in most cases. Marking round work pieces (radial and axial) is also possible with the FlyMarker® mini.
