PAT 4.0 Cable tie system – next generation

Up to 84 cable ties per minute

PAT 4.0 - Cable tie installation system

The PAT 4.0 automatic cable tie system from Panduit is designed to maximize bundling productivity with gains of up to 25% over other automatic cable tie systems and over six times the speed of manual methods. This enhanced productivity is delivered via a light weight, ergonomic tool head capable of installing up to 84 cable ties per minute while reducing user fatigue and improving tool maneuverability. The redesign of the tool dispenser features an innovative, user-friendly, touch-screen display with an icon-based menu that supports multiple languages. This simple, easy-to-use icon navigation allows users to quickly gain familiarity with the system to address quick setup/operation, ease of routine maintenance, and rapid troubleshooting tasks resulting in increased uptime.
