New strengthened wiper arm

Exalto wiper test

Exalto wiperarm test centre

Exalto Wiper Technologies has introduced a new and stronger wiper arm for extended service life. Today's windscreen designs generate bigger, curvier windcreens. This requires longer and stronger pantograph arms that last for a long time. At the test facility of Exalto Wiper Technologies in the Netherlands, a new construction has been designed and tested over many millions of cycles. The result is a reinforced gallery and improved wiper arm head. The new design has already been launched in numerous new projects.
