

Cactus CCS – Integration platform for the railway

Infrastructure operators today are often stuck with several different generations of control systems, each dedicated to a specific task. Information must be retrieved and merged from different systems, so decision making is more complicated than it needs to be. Cactus Rail combines its heritage as a TMS provider with the latest innovations in software. This combination gives Cactus the advantage of both understanding legacy systems in the railway domain and being able to use new technology to deliver unparalleled capabilities. The true enabler for combining information from all systems is the Cactus best in class industrial integration platform. The fully scalable Cactus CCS offers real-time performance with continuous integrated automation throughout its life cycle.
