Control desk station of the future: Response NEXTGen

The best console option: Response NEXTGen

Evans Consoles is the world's largest manufacturer of consoles and the biggest supplier of control room solutions across all industries. It is produced in Canada, China and the Netherlands. At InnoTrans, the railway customers will first be presented with the control station of the future "Response NextGen ". It has been specially developed for requirements that are mainly found in the DB Netz, 3-S-headquarters of DB Station & service and other infrastructure projects of DB AG or other railway companies. The patented monitor support systems, the flexible modular design, the cable management system and ultimately the possibility of large displays make the control room workplace of the future from this control station.
