Leather-like look combined with excellent cleaning properties

TEC-Leather – excellent appearance even after months of use

TEC-Leather – highly stretchable and easy to clean

Lantal's new, innovative TEC-Leather not only has a noble and leather-like look, but also offers many advantages over conventional leather and artificial leather products and thus meets several customer needs at once. The unique cleaning properties of the material are particularly remarkable. The surface of TEC-Leather is highly dirt-repellent, which reduces the cleaning effort. Ballpoint marks and dirt residues can be easily wiped off with a moist cloth. The supple material has already been used by several railway companies and retained its excellent appearance even after months of use. TEC-Leather does not cause skin irritation, has very good thermal properties and is resistant to fungal attack. In addition, the high elasticity of the material makes it easy to assemble, even with complex seat shapes. The Lantal product does not require an additional fireblocker, which leads to cost savings.
