Inspection vehicle MIV 1-25 for all monorail systems

Inspection and maintenance vehicle MIV 1-25

The Maintenance Inspection Vehicle MIV 1-25 developed by L&S is primarily designed for track inspection and maintenance of monorail systems. The 24-ton specialized machine is equipped with a GPS-guided video recording unit to detect possible damage to the track with the utmost precision. The fully air-conditioned operator's cabin offers a 4-person team of experts a safe and comfortable working environment even under the most extreme operating conditions. The specialized machine is additionally equipped with height-adjustable working platforms on both sides of the vehicle, an up to 8 m telescopic passenger basket for signal or station maintenance and an installed auxiliary crane. These extra features make the MIV 1-25 vehicle an indispensable rolling tool for efficient track maintenance. Furthermore, the specialized machine is provided with appropriate couplings and sufficient tractive force for salvaging defective vehicles.
