First complete solution for vehicle cleaning

Enter vehicle number via the cleaning app server

Overview of performed cleaning services in the server backend

The Cleaning Database is the first software solution for planning, recording, quality checking, billing and analysing all your cleaning services across the entire vehicle fleet. We offer an uncomplicated solution, ready for immediate use, which does not require any specific infrastructure. The rental option means that no investment costs are involved and it is quick and easy to get on board. The Cleaning Database is scalable for use with medium and largescale enterprises. The cleaning database is the only software on the market that covers the entire process from planning to clearing. As a result, the processes in the company are significantly optimized.
