Coach™ II multi-band antenna

PCTEL Coach™ II Multiband Antenna

The new Coach™ II GNSS-Multiband antenna (GL9X1AX-SF) offers nine antenna ports, including multi-port 4G LTE and 802.11ac MIMO connectivity. The antenna as well offers optimized 4G LTE and Dual-Band 802.11ac WiFi coverage in a 33% lower profile housing than its first-generation version. It also features PCTEL's proprietary high rejection GNSS technology for optimized performance and support of voice- and data networks with multiple network providers. It is ideal for mounting on vehicles with low overhead clearance, or on IIoT locations with limited installation height allowances. The IP67 conform design features (when assembled on a sealed surface) maximized protection against water and dust ingress. Proprietary filtering with High Rejection enables a multiband coverage and obtains a superior Out-Of-Band rejection for all GNSS-frequencies.
